

New VisionAir™ system is innovative, user-friendly and versatile system for use in Restaurants, Casinos, Offices, Hospitals and more

## United Air Specialists' VisionAir™ is Newest Solution to Indoor Air Quality Concerns

CINCINNATI, OH – August 8, 2003 – United Air Specialists, Inc. (UAS) introduces VisionAir™, a new air cleaning system that combines an expandable, attractive design, remote control operation and interchangeable filters to provide ease of operation and effective air cleaning – removing up to 99.97 percent of indoor irritants and pollutants like bacteria and viruses, pollen, fungi, aerosols and smoke.

With indoor air quality increasingly becoming a concern in many areas, UAS designed the VisionAir system to easily adapt to a variety of environments, including restaurants and lounges, hospitals and nursing homes, casinos and entertainment halls, office buildings and schools. The following expansion options are available to meet the needs of specific applications:

- **Odor-Free Filter:** For more pervasive smells not captured by the VisionAir's standard carbon filter and FreeBreeze air freshener.
- **Sterile Air:** UV light kills microorganisms such as bacteria, viruses and fungi to reduce the number of indoor air problems.
- **Air Monitor:** The Air Monitor measures pollution continuously and automatically adjusts the fan speed accordingly.

Made to fit any interior, the VisionAir system comes in either off white or bronze and offers two models: the VisionAir1 and the VisionAir2. The VisionAir1 services up to 10,595 cubic feet and can be either a freestanding, portable unit or mounted to the wall or ceiling. The VisionAir2 services up to 21,190 cubic feet and can be mounted on or in a wall or ceiling. Both models perform quietly – on the quietest setting, the sound level is lower than that of an average PC.

With this system, UAS has simplified the filter maintenance process. The VisionAir system offers the option of using the electrostatic ElectroMax filter or the HEPA MediaMax filter interchangeably. These filters are made of durable material that is specially pleated to provide a large surface area, resulting in low air resistance and high dirt trapping capacity.

The ElectroMax filter, which traps 95 percent of all indoor irritants and pollution using an electric charge, can be washed and reused. The HEPA MediaMax filter removes 99.97 percent of bacteria, viruses, dust, mold and other irritants. With average usage, the MediaMax filter will last up to seven months before replacement. The X-Changer feature, standard on both models, indicates when a filter needs replacing.

The VisionAir system offers all of these features at a competitive cost, which includes a three-year parts and labor warranty.
